Description	Result	Flag	Range	Units
PCR				
SARS-CoV2 RT PCR Nasopharyngeal swab	POSITIVE			

Limitations: Results are for the identification of SARS-CoV-2 RNA. The SARS-CoV-2 RNA is generally detectable in nasopharyngeal swab specimens during the acute phase of infection. Negative results do not preclude SARS-CoV-2 infection and should not be used as the sole basis for patient management decisions. Negative results must be combined with clinical observations, patient history, and epidemiological information. This test has been authorized by FDA under EUA, justifying the authorization of emergency use of in vitro diagnostics for the detection and/or diagnosis of COVID-19 under Section 564(b) (1) of the Act, 21 U.S.C. - 360bbb-3(b)(1).
